## (57) Abstract

**PROBLEM TO BE SOLVED:** To provide a system for specifying a position on an image in a portable terminal with which a part of the image displayed on a screen is promptly specified by an easy operation in the portable terminal.

**SOLUTION:** The screen area of the portable terminal is sectioned into vertically and horizontally arrayed small areas, center points of the respective small areas are set to coordinate points and the coordinate point at the center of the screen area is set to the origin of the screen area. A marker is displayed at the origin, the marker is made movable vertically and horizontally by a coordinate unit by an operation button of the portable terminal and the respective coordinate points are made specifiable. The image is displayed in the screen area, and by specifying one of the coordinate points on the displayed image, the small area on the image whose center point is the specified coordinate point is specified.
